

iSkool

Learning Management System

iSkool is a modern Learning Management System (LMS) tailored for South African schools. It enables efficient management of learning, performance tracking, and enhanced communication among teachers, learners, and parents by integrating quizzes, assignments, analytics, and communication tools into a single digital platform.

This document provides a guided tour to some iSkool LMS features.

ADVANCED PERFORMANCE ANALYTICS

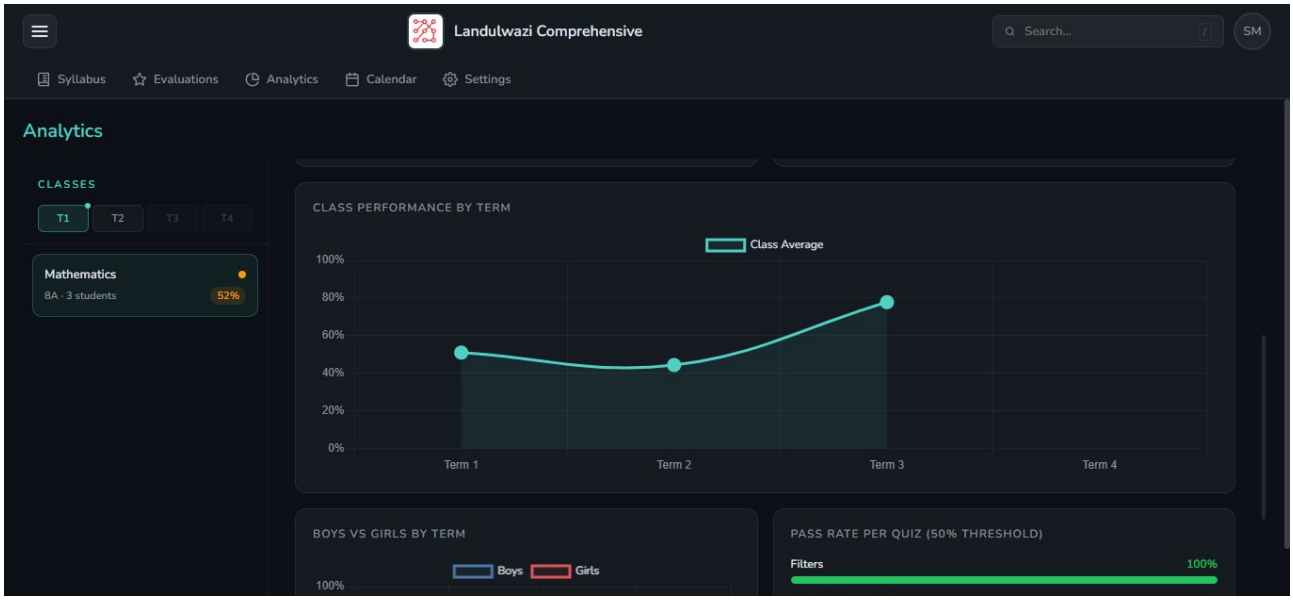

Analytics — Term 1 Summary

The iSkool analytics dashboard provides school leaders with a comprehensive Term 1 overview, including class averages, the highest-scoring quiz, top performers, and a side-by-side comparison of boys' and girls' performance per assessment.

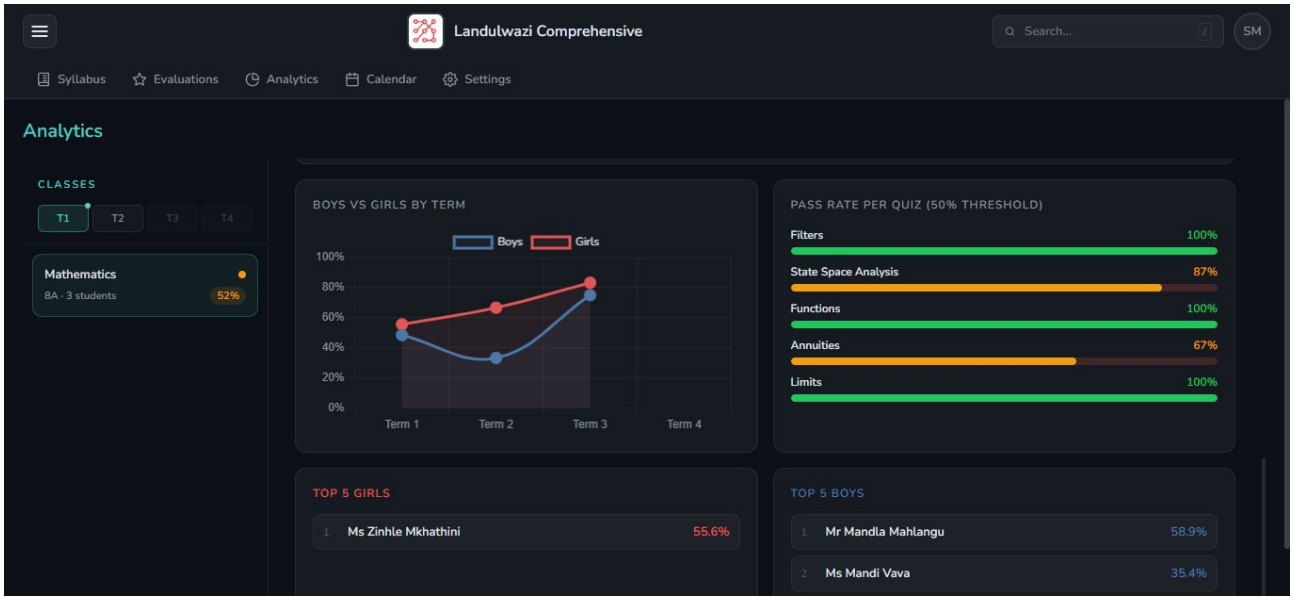

Analytics — Class Performance Across Terms

Class average trends are plotted across all four terms, offering principals a clear view of whether the school is improving or declining over the academic year.

Analytics — Gender Gap & Pass Rates

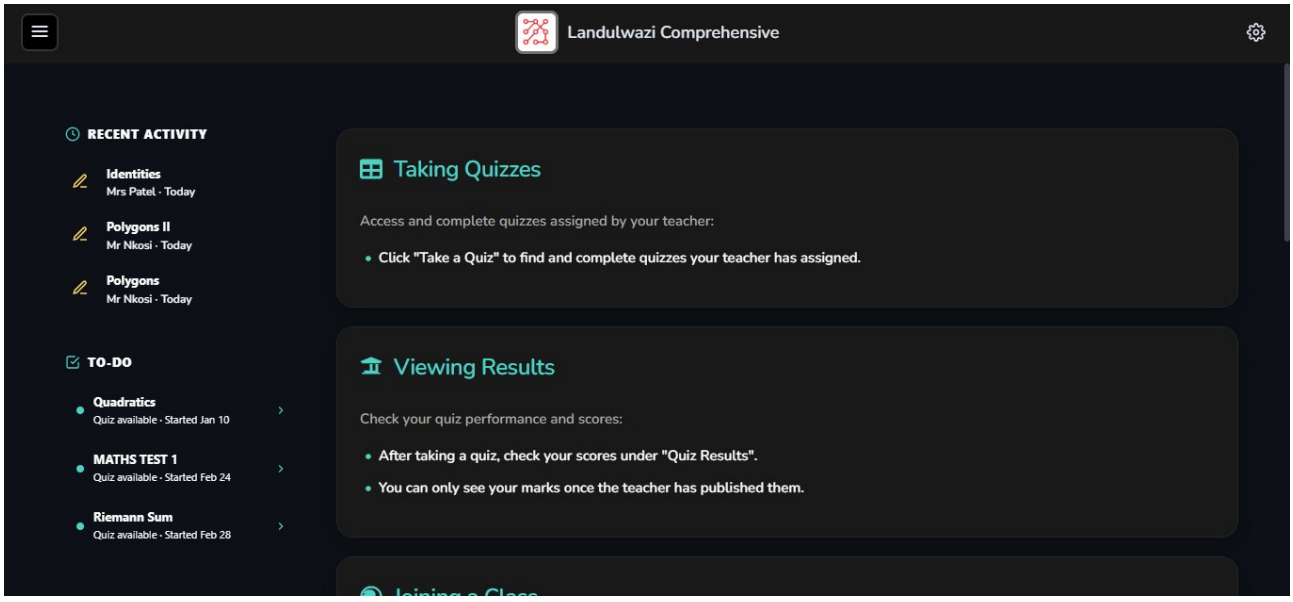

Teachers can track pass rates per quiz, monitor gender performance gaps, and view top performers ranked by score. This delivers actionable insights for early intervention.

LEARNER EXPERIENCE

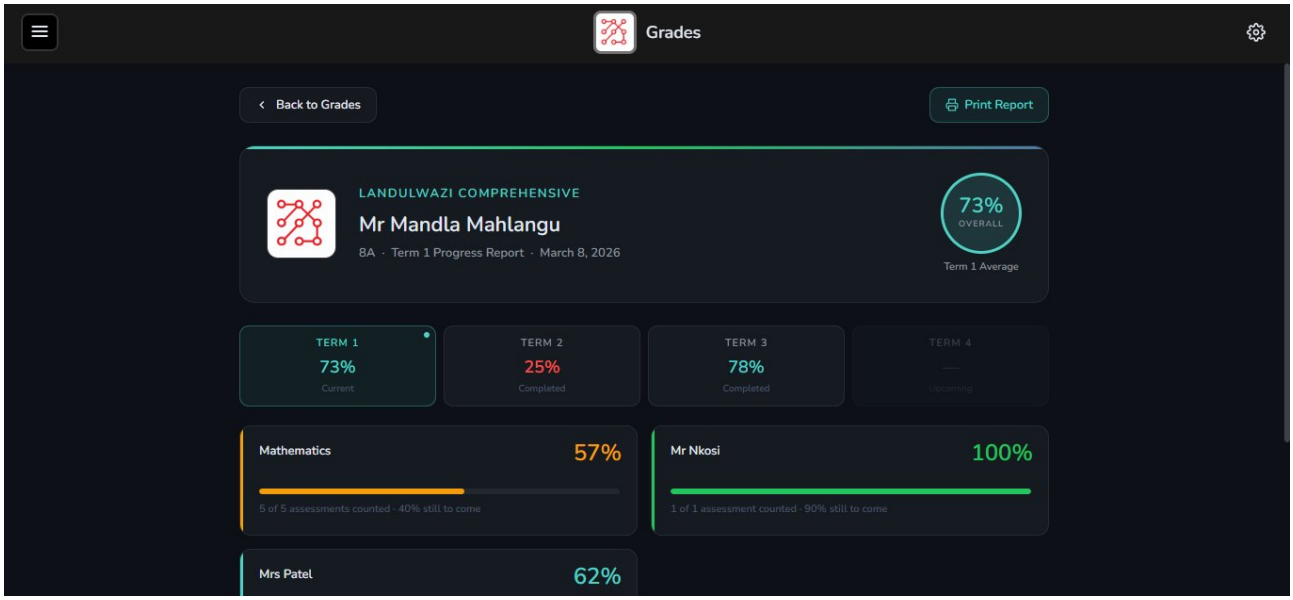

Learner Dashboard — Home

Learners arrive at a personalized home page displaying recent activity, upcoming quizzes, and built-in guides. Everything a learner needs is just one tap away.

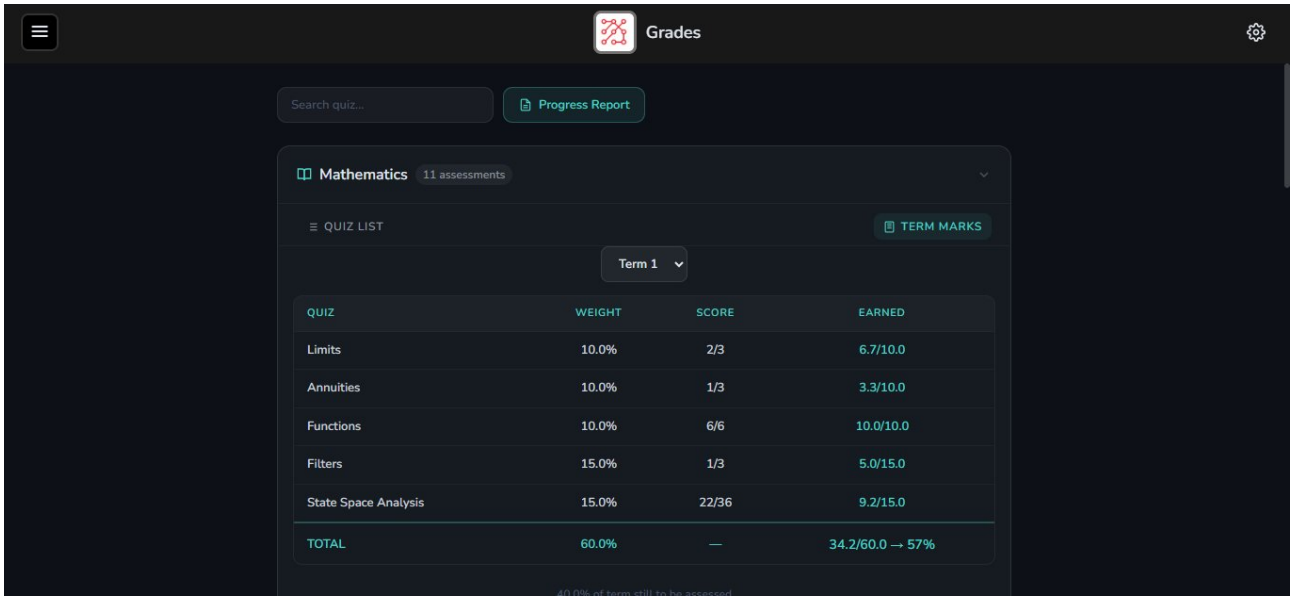

Learner Dashboard — Term Overview

Each learner views their overall term average and subject-by-subject progress across all four terms. This ensures learners always know their standing.

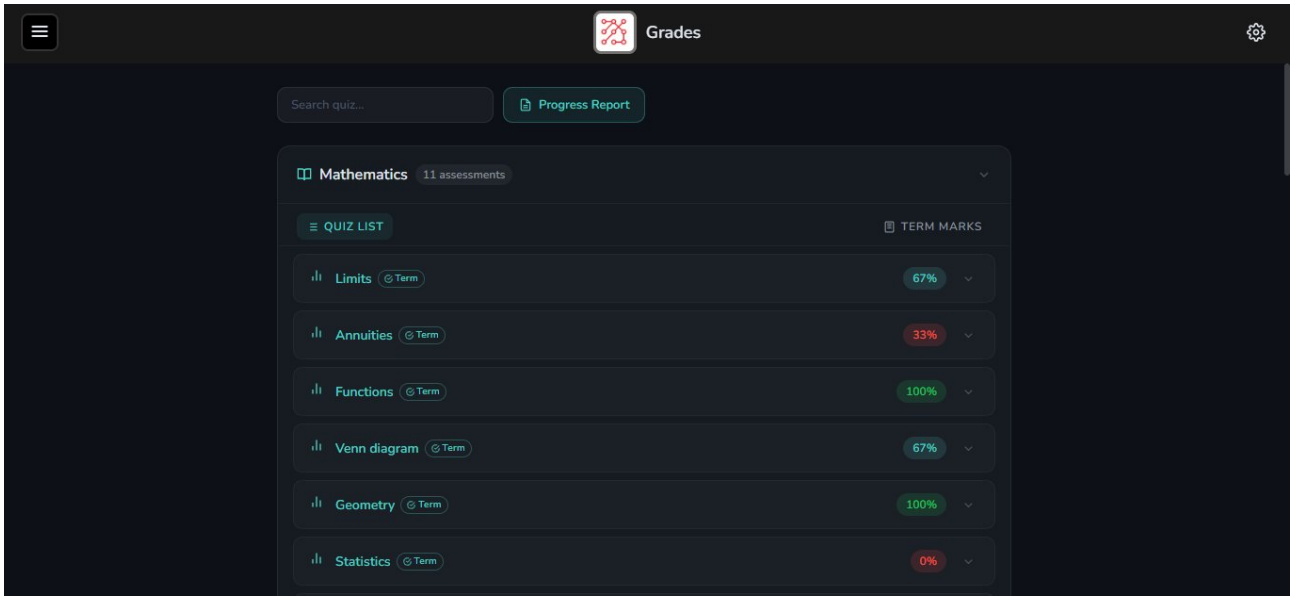

Subject Grade Breakdown

Every subject displays assessed quizzes with their weight, score, and earned marks. Learners can see how much of the term remains to be assessed and plan accordingly.

Quiz List — Full Assessment History

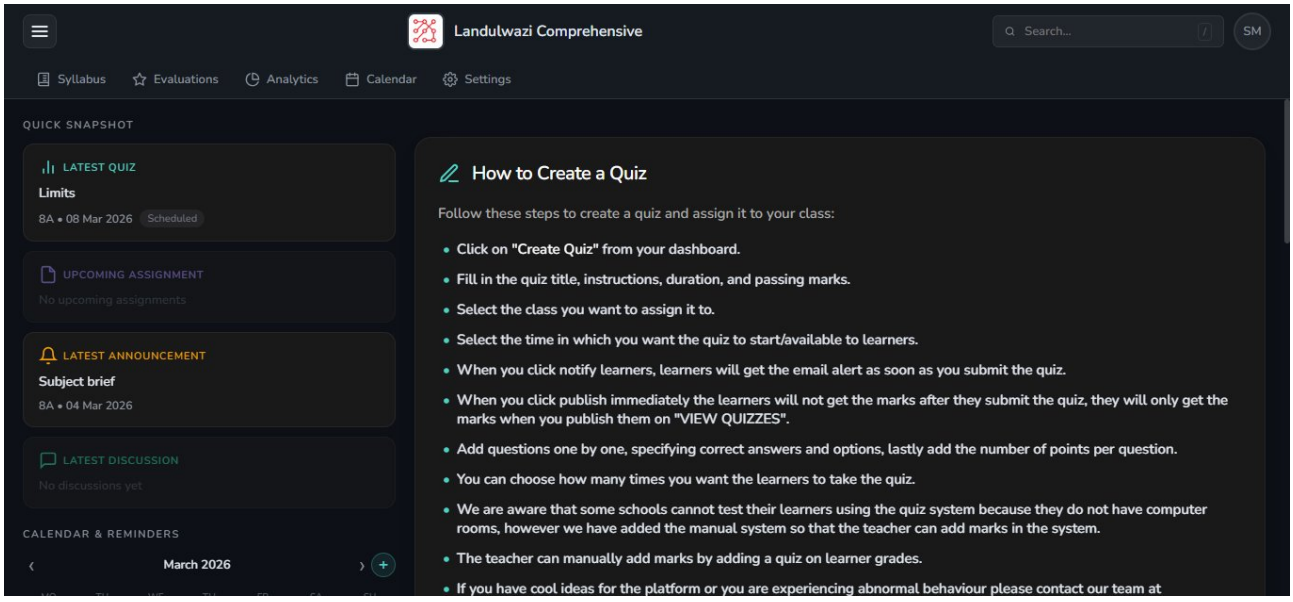

A complete list of quizzes across all terms, color-coded by performance, allows learners to quickly identify areas needing attention.

TEACHER TOOLS

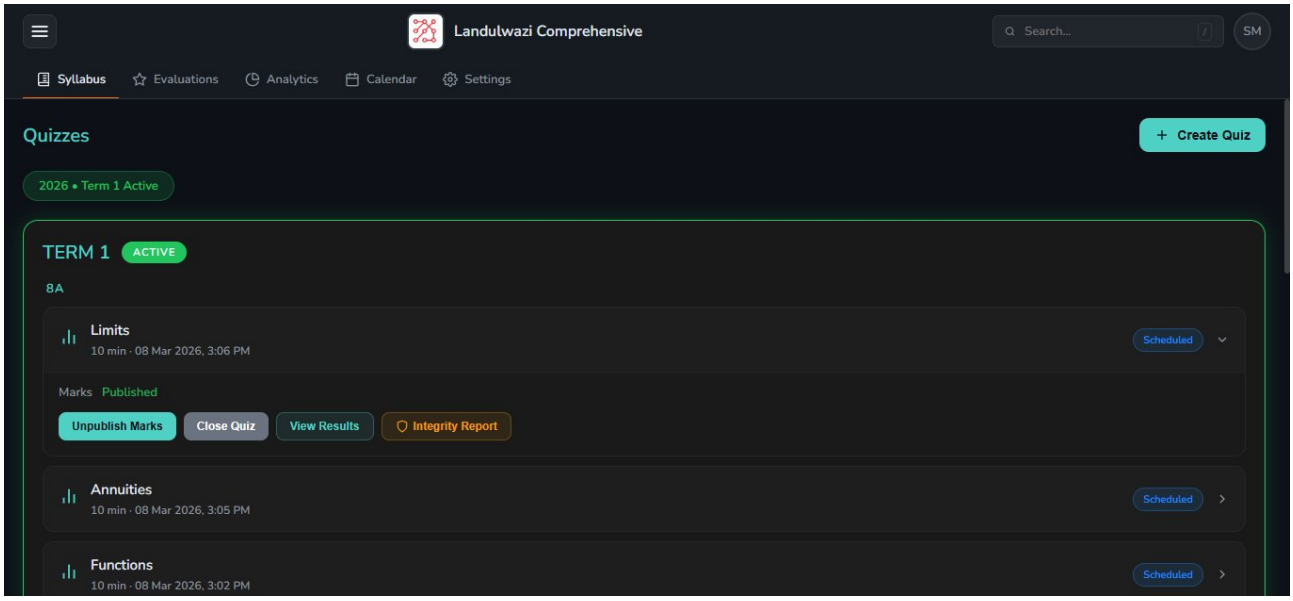

Teacher Dashboard — Home

Teachers view their latest quiz, upcoming assignments, and announcements at a glance. A built-in step-by-step guide assists new teachers without requiring additional training.

Quiz Management

Quizzes are scheduled and managed from a clean syllabus view. Teachers can publish marks, close quizzes, and generate integrity reports — all in one click.

Assessment Results — Per Learner View

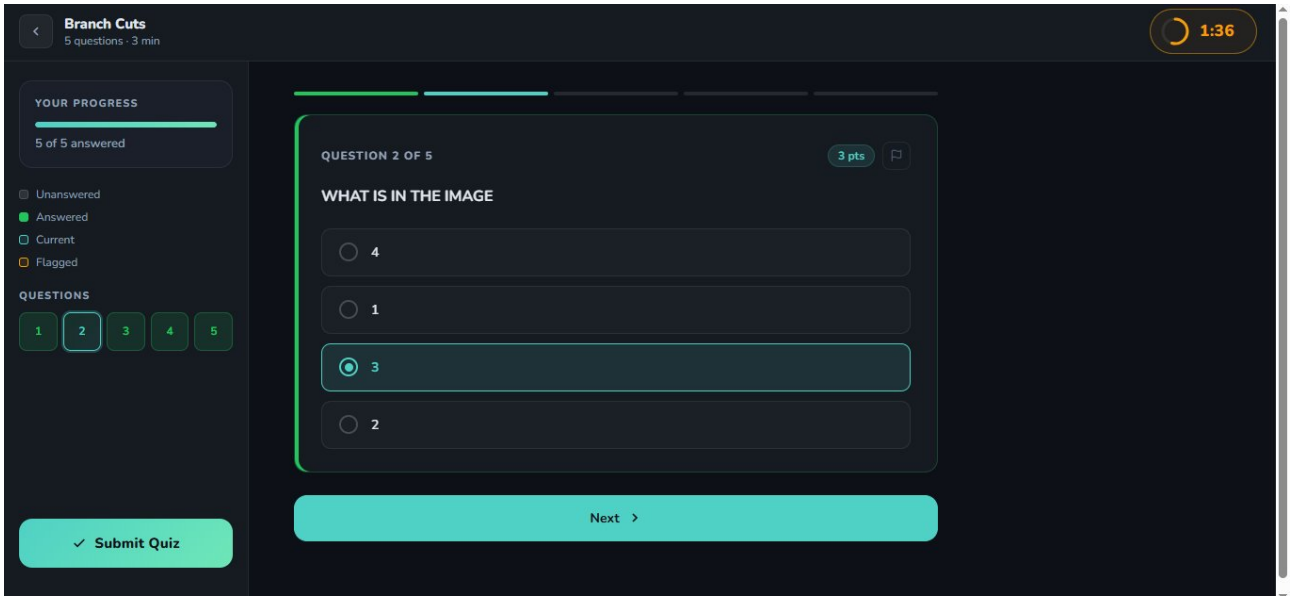

Teachers review every learner's score for a specific assessment side by side, simplifying the identification of those needing support or ready to advance.

QUIZ INTERFACE & AI INTEGRITY MONITORING

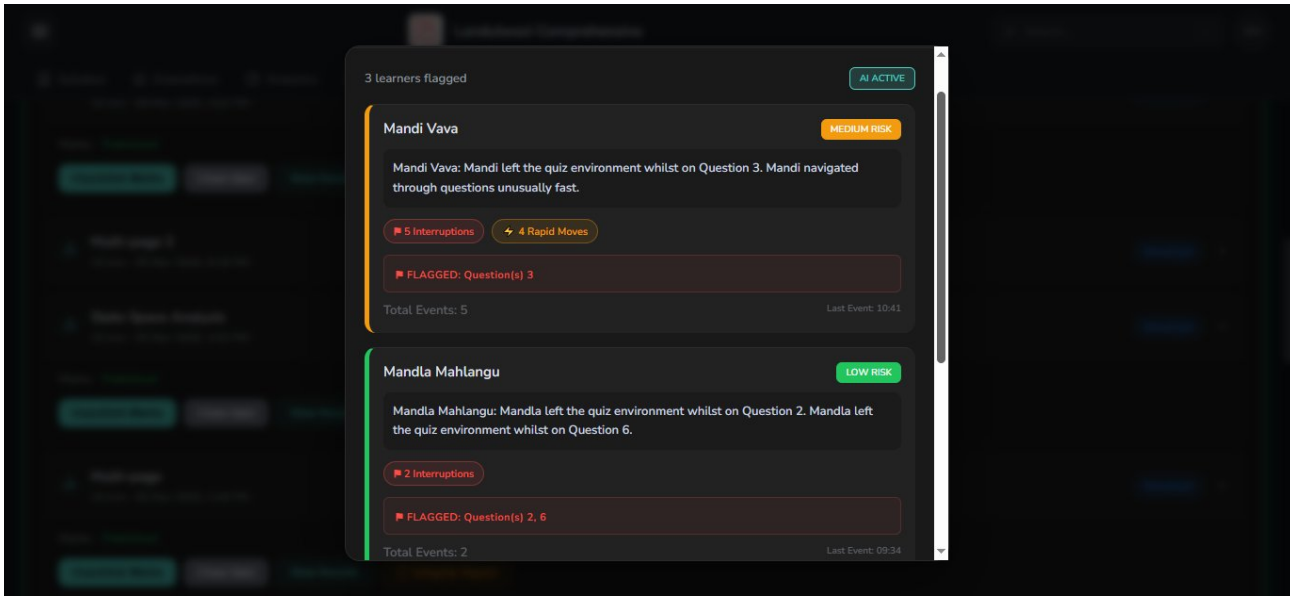

Learner Quiz Interface

Learners complete quizzes in a clean, distraction-free interface featuring a live countdown timer, question progress tracker, and the option to flag questions for review. It functions seamlessly on any device.

AI-Assisted Integrity Monitoring

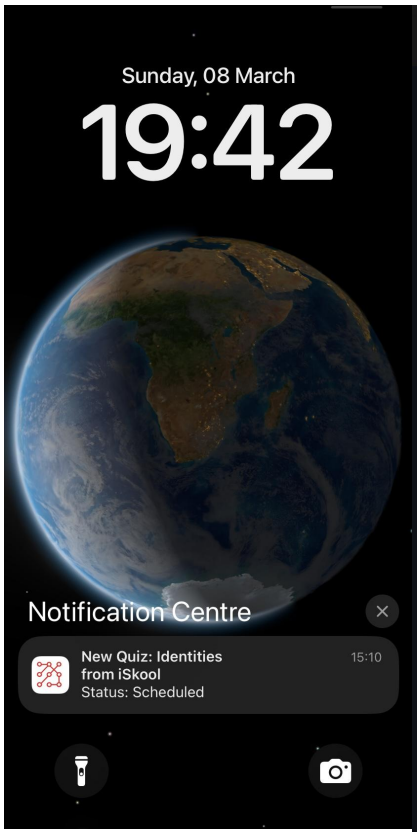

iSkool incorporates AI-assisted monitoring for every quiz. The system tracks behavioral indicators — such as leaving the quiz environment or navigating unusually fast — and automatically generates a risk-rated integrity report per learner. This unique feature distinguishes iSkool from standard assessment platforms.

MOBILE APP & COMMUNICATION

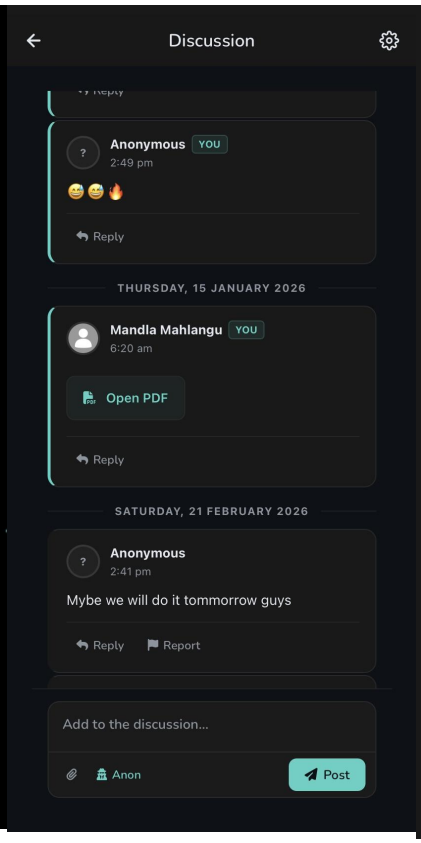

iSkool on Mobile

iSkool is fully accessible on mobile devices. Learners and teachers can view grades, discussions, announcements, and quizzes directly from their phones — no laptop required. This is particularly vital in South African schools, where learners often rely on mobile devices.

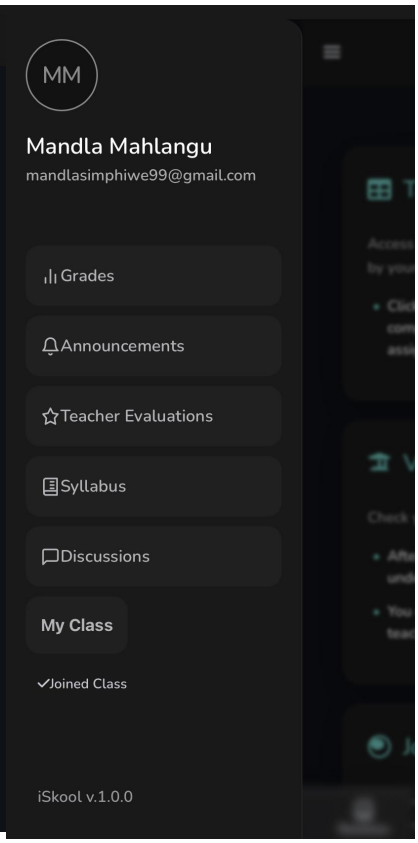

Push Notifications

Learners receive instant push notifications for new quizzes — directly on their phone lock screen.

Class Discussions

Learners and teachers share resources and messages in a class discussion forum. Anonymous posting is supported for open communication.

Mobile Dashboard

The full learner dashboard is available on mobile, including grades, announcements, syllabus, discussions, and class management — all in one intuitive menu.
