Dear Principal,

I hope this letter finds you well.

My name is Mandla Mahlangu, an Information Engineering student at Wits and the creator of iSkool - a digital school platform built specifically for South African schools to simplify administration, support learners, and connect teachers, parents, and principals in one place.

Many schools still rely on WhatsApp, manual registers, and scattered systems to manage communication, learning, and performance. iSkool was built to change that - affordably and immediately.

What does iSkool do?

- Teachers can post quizzes, track learner progress, and manage classes online.
- Learners can join classes, take assessments, and ask/answer academic questions.
- Parents can view marks, send direct messages to teachers, and stay informed.
- Principals get a real-time view of performance, attendance, and announcements.

The system is light, mobile-friendly, and works even on low data. It supports both digital and manual workflows - so schools without strong internet can still benefit.

Why iSkool?

- Easy to use - designed with local schools in mind.
- Affordable - learners pay only R5/month for access.
- Customizable - tailored to your school's structure and subjects.
- Secure - each school has its own controlled environment.

I'd love to demonstrate the platform in person or set up a short call to show you how your school can benefit.

Thank you for your time, and for the incredible work you do to shape our future. I look forward to hearing from you.

Warm regards,

Mandla Mahlangu

Wits Engineering Student
